Common Workflows

1. Quick Commit & Push

```
gs
ga .
gc "your commit message"
gp
```

2. Review Before Push

```
gs
gd
ga .
gc "commit message"
gp
```

3. Create Pull Request

```
gs
ga .
gc "feature: add X"
gp
ghpr
```

4. Switch Branches

```
gb
gco branch-name
gs
```

Step-by-Step Guides

First Time Setup

```
# 1. Check git status
gs

# 2. Configure git (first time)
git config --global user.name
    "Your Name"
git config --global user.email
    "you@example.com"

# 3. Verify GitHub CLI
gh auth status
```

Making Changes

```
# 1. Check current status
gs

# 2. See what changed
gd

# 3. Add all changes
ga .

# 4. Commit with message
gc "describe your changes"

# 5. Push to GitHub
```

```
gp
```

Working with PRs

```
# List all PRs
ghprl

# View specific PR
ghprv 123

# Checkout PR locally
ghprc 123

# Create new PR
ghpr

# Merge PR
ghprm 123
```

View History

```
# Last 10 commits
gl

# Full diff
gd

# Check status
gs
```

Quick Tips:

Always run `gs` before and after commands to see changes • Use `gd` to review before committing
Write clear commit messages • Push often to backup your work
